Kyle Card: A Collaborator's Guide

Ideal Working Conditions	**On The Clock**
I work most efficiently in the mornings. If I'm writing or coding, I prefer to work from home because I can concentrate better. Otherwise, I prefer to be in an energetic lab where one can feel free to share ideas, ask questions, and just be themselves.	I usually work from 9am – 5pm and take the weekends off. Feel free to reach out to me at any time though! I have Slack notifications turned off after 10pm, so I might not see a message right away, but I'll respond the next morning.
How to Reach Me	**How to Give Me Feedback**
Slack. I check it regularly during the day, and less so on the weekends.	I prefer direct feedback.
I Need…	**I Struggle With…**
Time to think through new ideas and hypotheses, motivating questions, and plan appropriate experimental designs. I usually like to approach a problem from several different angles before I begin.	Science is one of my passions and I am always excited to talk about others' projects. I therefore tend to ask questions and muse about ideas. However, I don't want to put others on the spot or butt in. Please let me know if I am.
I Can Help With…	**Else**
Bacterial experimental evolution, experimental design, editing grants and manuscripts, R, graduate school-related questions about preparing for committee meetings, and qualifying and defense exams
